# PATIOS OF PENTOMINOES

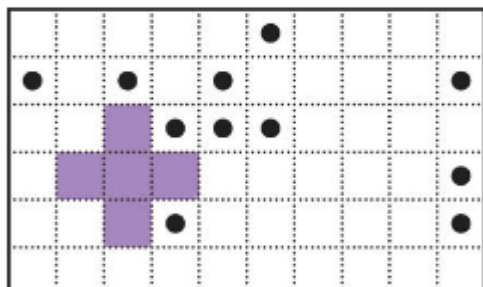

BY RODOLFO KURCHAN

The pentominoes are the 12 different shapes that you can make with 5 unit squares. They are often identified by the letters they resemble, as shown at right.

In these problems, your goal is to cover the patios with the 12 different pentominoes. In each patio there is one pentomino already placed and 11 points where each point is part of a different pentomino. How are the patios covered? Pentominoes may be rotated or reflected as needed.
