Rodolfo Kurchan's Tetrominoes 12345

This puzzle contains tetrominoes in ascending numbers. Each shape has its own color.

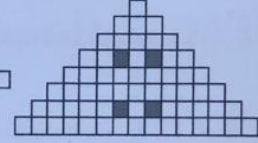

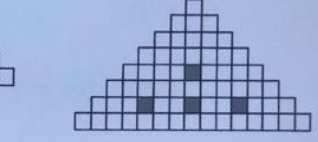

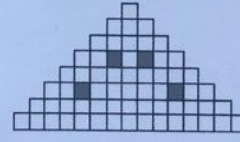

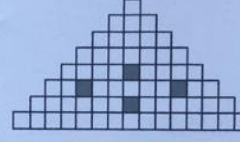

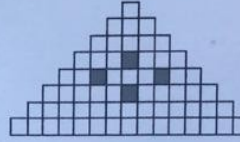

4 single squares are fillers.

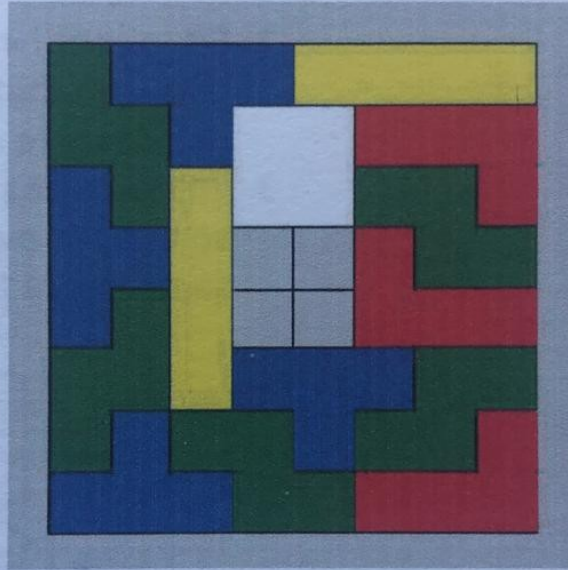

Gray squares are empty spaces. Use the single squares to fill them.

1. Fit pieces together into grids on this page so all of the same color are joined by at least 1 unit side.

Place the four single squares into shaded areas and solve around them.

2. Fit pieces into the grids below so that same colors do not share sides.
3. Fit the pieces into the grids so that not even corners of same colors touch.
